SPC Floor Installation Guides

1. Must Install 4mm - 10mm expansion joint around the floor.

2. Floor should be dry. Do not use it on wet floor.

3. If the area exceeds more than 300 square meters or the length or width of the room is more than 15 meters then the floor is divided and the expansionjoint is increased.

4. Handle lightly during transportation, avoid damaging the floor fastener and put it on a smooth ground. Do not stack vertically.

5. The ground level is clean, height difference does not exceed plus or minus1mm. It is recommended to do ground leveling or self-leveling.

6. You can choose to install 1mm - 1.5mm floor film or mute pad before laying the SPC floor if you are not buying the optional IXPE layer.

7. In the installation process, the fastener should be buckled in place and notools or objects should be used to hit the fastener. Try to avoid tight floor installation and groove damage.

8. After installation pay attention to floor protection and daily maintenance.

Compositon of SPC Flooring

#	Layer	Description
1	UV COATING	Advanced stain and scratch protection.
2	WEAR LAYER	Hardened wear layer provides excellent resistance to scuffs and abrasions.
3	DECOR FILM	High definition film prints create vivid, natural wood, stone and abstract looks.
4	SPC CORE	Phthalate-free extruded closed-cell core provides exceptional rigidity, dimensional stability and anti-telegraphing.
5	IXPE UNDERLAY (OPTIONAL)	High density cross-linked layer minimizes impact and transmitted sound, provides underfoot warmth and comfort and mitigates subfloor imperfections.

Advantages of SPC Flooring

100% WATERPROOF

SPC flooring is made of plastic resin and natural stone, which are 100% waterproof. So you don't have to worry about the floor being damp, mildewed or deformed. Therefore, SPC flooring can be used in every room of your house, even in bathrooms and kitchen.

FIRE RETARDENT

EURO SPC flooring is tested and qualified for fire rating of B1. It does not produce suffocating harmful or toxic fumes in the event of an accident.

DURABILITY

SPC floor has a dense core remove which makes it more resistant to damage caused by impact or heavy objects.

EASY TO INSTALL

EURO SPC flooring uses click-lock technology, making it easy to install without additional materials and can be finished twice as faster than other materials like stone or ceramic tile.

4MM THICKNESS

EURO SPC floors have a thickness of 4 millimeters. The thickness core of EURO SPC makes it feel more stable and cushioned underfoot. It also adds insulation and helps keep the floor warm in winter and gives a cooling effect in hot summer.

EASY TO CLEAN

SPC flooring is also easy to maintain. When it gets dirty, all you have to do is wipe it with a damp mop or broom. It keeps the flooring bright and shiny. You don't need to spend hours scrubbing it.

ANTI-SLIP

The wooden texture surface of the EURO SPC floor is made from non-slip technology having a high density structure and a non-slip wooden textured surface. This makes the flooring ideally suited for homes with children or the elderly.

STAIN RESISTANT

EURO SPC flooring has a wear layer that resists stains and spills even if the spills are dried-up, all you need is a damp cloth to remove them.

NO FORMALDEHYDE

Formaldehyde mainly comes from all kinds of adhesives or glue. The main components and production process of ERUO SPC determines its flooring environmental performance as it does not use glue in the production process. Therefore, it does not contain harmful substances such as formalde-hyde and benzene.

TERMITE PROOF

EURO SPC flooring is not produced using any wood material. Since it is a stone plastic composite, it has a 100% termite resistance. You need not to worry about termite attack or flooring becoming brittle and losing its functionality.
